

COMPANY PROFILE

Pencil and Stationery Products Manufacturers Inc. (PSPMI) was established in 2011 at Subic Bay, Philippines. After more than 10 years since its incorporation, PSPMI has grown from its initial workshop of 750 sq.m to two workshops covering more than 6,300 sq.m

Over the past 10 years, PSPMI has consistently passed key Factory audits by US and European Retailers as well as big brand companies. These audits cover our Factory Capability and Quality Assurance, Social and Security practices., which allows us to serve customers/retailers both domestic and abroad.

PSPMI has strict and professional QA systems in place to ensure all our products conforms to the safety standards of US, EU and other major countries. As a result of our excellent quality control performance, we have been awarded self inspection status by most of our clients.

We have an R&D and design team to support product development. In response to the global emission reduction program brought forth by the need for companies to be more environmentally conscious, PSPMI has developed our eco friendly pencil -BioFiber pencil. The BioFiber pencil is made from agricultural and forest waste, yet it still retains the same function of traditional wooden pencils.

Feel free to email us with your requirements, and you will find us a reliable partner!

Biofiber Pencils

Patented New Pencil -BIO-FIBER PENCILS

SUSTAINABILITY

- Carbon Emission of the Biofiber pencil is only 23.40% of the wooden pencils

- Made of Plant Fiber – Wastes recycled from agriculture and forest industry
- Save Forest & Recycle Wastes both raw materials & in production
Such as saw dust, bamboo chips, nut shells, corn stems. Those wastes are smashed into fine powder, then mix with resin and extruded into pencils. No wood slat is used
- Much simplify the processing steps of wooden pencils
- Saves much power/energy
- Avoid the following pollution in wooden pencil production:
 - a. water pollution – wood slat treating process
 - b. noise pollution – wood-working process
 - c. air pollution – painting process
- Better and clean working conditions benefits employee's health.

Unique Functions comparing to Wooden Pencil

- Good Sharpening- core hard get broken and chips are in one piece
- Pencil chips can be Re-Used to do activities
- More durable - Over 30% extra long writing length/painting area than wooden pencils
- Can be ANTIBIOTIC, SCENTED, LUMINOUS both in the barrel and core
- Variety Choice on shapes. Besides the normal round, hex, triangle, we can supply square, star, heart, flower, oval & other novelty shapes
- Solid bright colored barrels

Re-Use Chips to do Activities!

Chips are shaved in one piece and can be collected for kids to do activities.

They can use the chips to create their own art piece.
